ABOUT IN-ANALYTICS DASHBOARD SUITE

IN ANALYTICS
A powerful multi-factor dashboard suite built on TradingView and optimized for Indian markets. We transform complex decision-making by synthesizing vast amounts of data in the form of technical signals, macroeconomic conditions, market regimes, company fundamentals and risk management into one intelligent system. Our algorithm adapts dynamically to changing market environments and your personal trading style, delivering high-probability signals when opportunities emerge. It doesn't just parse large amounts of data—we translate it into actionable intelligence that respects your risk parameters.
Simple. Unified. Decisive.

IN BUY/SELL
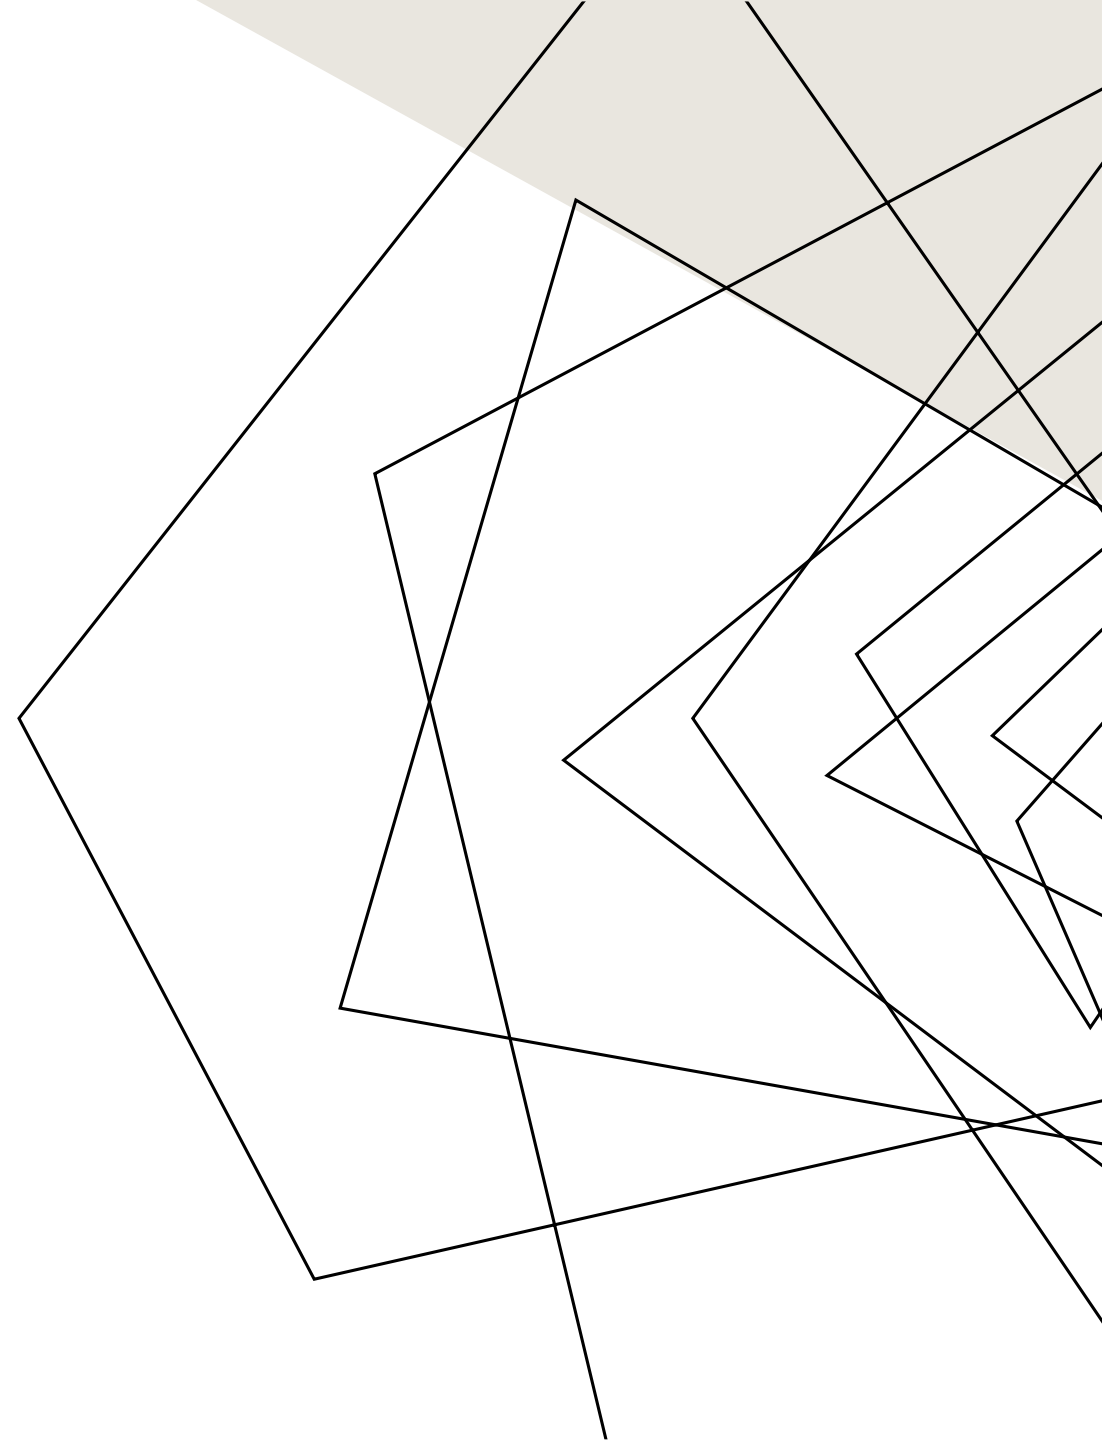

IN ANALYTICS

DASH SUITE COMPONENTS

1. IN BUY/SELL SCREENER

+

2. IN ANALYTICS DASHBOARD

PROBLEM

- Market Gap: Indian retail trading solutions often require multiple platforms for screening, filtering, and in-depth analysis. This fragmented approach leads to inefficiencies and missed opportunities.

- Financial Impact: investors struggle to interpret large volumes of data spread across disparate sources, resulting in suboptimal trades and reduced profitability. underscoring a growing need for simplified tools.

- Productivity Loss: Retails investors/traders often spend significant time juggling screeners, technical indicators, and manual chart analysis, affecting overall productivity and speed of decision-making. An integrated system that combines automated scrip screening and comprehensive analytics can widen the net and cut analysis time substantially.

- Usability: **The Indian retail community increasingly demands user-friendly, high-utility tools. A single suite that includes (1) an automated indicator for screening/filtering a large universe of scrips, and (2) an analytics dashboard indicator for in-depth insights on selected scrips, addresses these needs while improving trade accuracy and efficiency.**

1.
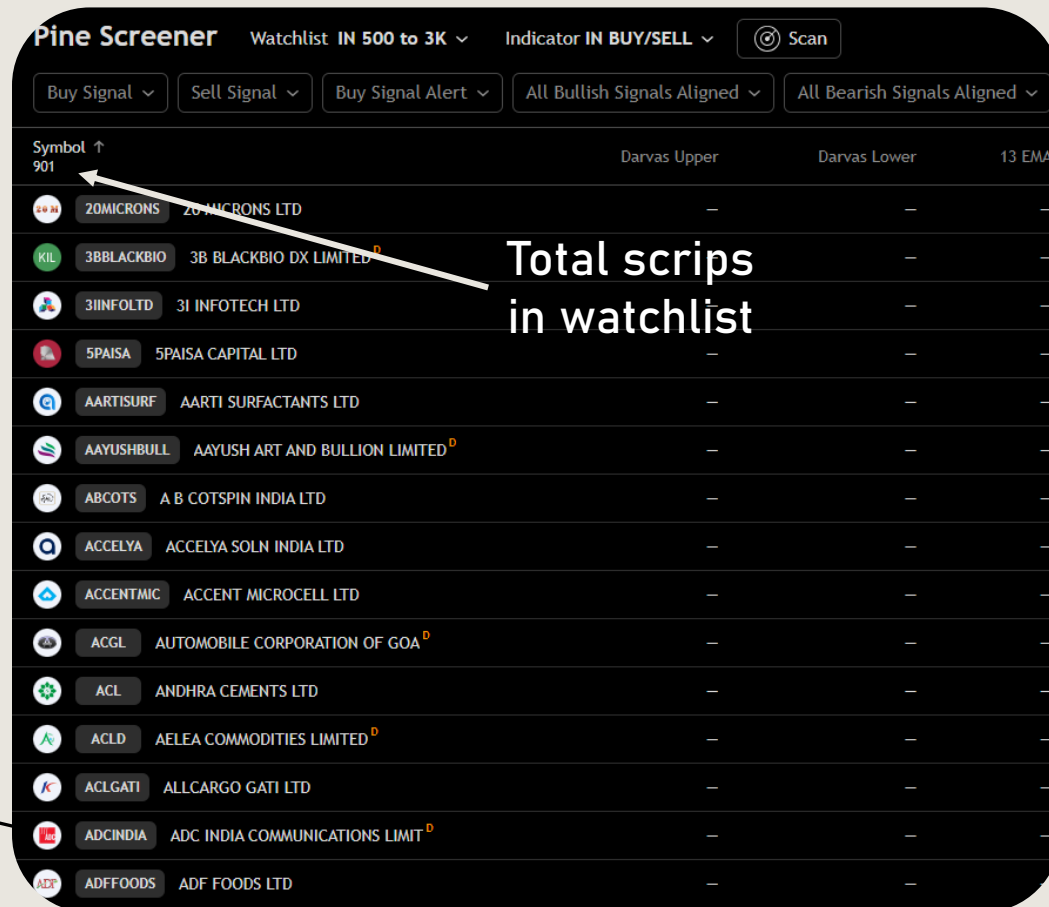

IN BUY / SELL SCREENER INDICATOR

IN - BUY / SELL INDICATOR
FOR AUTOMATED WATCHLIST & SCREENER ALERTS

- Enables quick screening of large number of scrips. Works across various asset and commodity classes.

- Leverages USA, IN bond yield spreads, exchange rate usd/inr, moving averages, darvas, mvp, elliot wave, td sequential, psar, vstop, base counting, relative volume, etc to generate higher probability signals.

- Various in-built conditions for screening as below:-

  - All Bullish / [Bearish] signals aligned, Buy[Sell] signal alerts, Buy[Sell] + Elliot wave Bullish [Bearish], Buy[Sell] + Darvas Breakout [Breakdown], Buy[Sell] + TD Sequential Bullish [Bearish], Strong uptrend / downtrend etc

  - Technicals

    - Darvas, Moving averages, timeframe high/low

IN ANALYTICS INDICATOR

[BETA]

IN – ANALYTICS DASHBOARD

INDICATOR FOR IN-DEPTH INSIGHTS

- is a comprehensive multi-factor trading indicator designed for the Indian market that combines technical analysis, economic indicators, fundamental data, and risk management into a unified system. It generates high probability signals based on our algorithm that adapts to different market regimes and trading styles.

IN – ANALYTICS DASHBOARD

KEY COMPONENTS

- **Auto Market Regime Detection**

- **Multi-Factor Signal Generation**

- **Select Trading / Investing Style**

- **Risk Management Tools**

- Automatically identifies market conditions (Strong Uptrend, Cautious Uptrend, Strong Downtrend, High Volatility, Low Volatility, etc.)

- Adjusts trading parameters based on current market conditions

- Monitors FII flows and yield curve analysis specific to the Indian market.

- Technical Indicators: Moving Averages, Darvas Box, MVP (Momentum-Volume-Price), Elliott Wave Analysis, TD Sequential, PSAR, VStop, Base Level Analysis

- Economic Indicators: Inflation rates, interest rates, GDP growth, gold prices

- Fundamental Analysis: Earnings growth, sales growth, profit margins, debt-to-equity ratios etc.

- Different trading styles (Scalper, Intraday, Swing, Positional, Long-Term) for different trade frequency needs.

- ATR-based stop loss calculation

- Position sizing based on account risk percentage

- Multiple take-profit targets at different risk-reward ratios

- Visual display of entry, stop, and target levels
